

PicoPlus[®]

Highest Power & Versatility

Treatments

Melasma

Tattoo Removal

Pigmentation

Skin Tone & Texture

PicoPlus® *Intelligently Designed with the Physician in Mind*

“The system offers many other benefits, including pigment removal, rejuvenation* and laser facial toning. The user-friendly interface comes with a toggle function for adjusting fluence energy settings very easily. Settings can be adjusted at any stage of treatment and the warm up time is very quick.” [Saleem Loghdey, MD]

Reproducible Results... Even on DIFFICULT Cases

Innovative

Industry exclusive 0.01 J/cm² settings permit safe and effective treatments on dark skin. Dual Focused Dots handpiece features adjustable depth micro-beam scanner for advanced skin rejuvenation procedures.

Effective

With high power for the most difficult cases, such as mild pigment (cafe-au-lait and freckles), recalcitrant tattoos, exotic ink colors, and more.

Intuitive

Designed for the most busy user, the system is a dream to use: instantly switch between wavelengths and pulse durations without the need for recalibration.

Wide range of applications

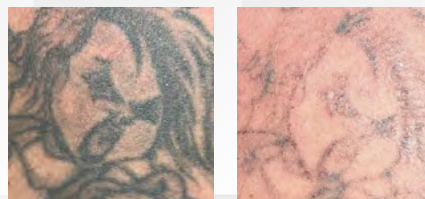

- Melasma
- Post Inflammatory Hyperpigmentation
- Freckles
- Cafe-au-lait
- Nevus of Ota
- Fractional Skin Rejuvenation
- Lentigos
- Seborrheic Keratoses
- Tattoos (Multicolor & Black)
- And More
